

Yaesu ATAS-120A Auto Active Tuning Antenna

The **ATAS-120A** is an active tuning mobile antenna system. When used with the FT-991 it will cover 40 through 6 meters. It provides this great coverage utilizing automatic motorized tuning. It is the successor to the ATAS-100. It utilizes control signals from the transceiver via the coaxial cable. Then the ATAS-120's internal motor adjusts the radiator length for the optimum SWR. This antenna does *not* come with coax cable or vehicle mount.

It can also be used for fixed base *VHF operation* with the addition of the optional ATBK-100 VHF/UHF counterpoise kit. In the case of the FT-450, this would be applicable to 6meter operation *only*.

The ATAS-120A covers the 7, 14, 21, 28, 50, 144 and 430 MHz amateur bands and is compatible with the FT-100, FT-450, FT-450D, FT-847, FT897, FT-897D, FT-991 and FT-991A.
